

BTME 2025, stand 622

TORO IRRIGATION BRINGS TRUE INNOVATION TO BTME

With a focus on water sustainability and providing products that allow for course managers to act as a guardian of the resource, Reesink Hydro-Scapes will be bringing the most advanced central control irrigation system, controllers, and sprinklers from Toro to BTME.

As the pinnacle of water management for golf, and Toro's only irrigation system for a reason: no other solution can do better, Toro Lynx Central Control system gives easy access to precise water resource management. This is thanks to an intuitive user interface and easy to use system that gives total control of the sprinkler network.

Visitors can come on stand to learn about the legacy of Toro. How its sprinklers are designed to be future proof, with forwards and backwards compatibility, and how replacement sprinklers are easily upgradeable to deliver truly innovative improvements to accuracy, performance and water efficiency.

Sprinkler precision will be evident in the Infinity series which allows for maximum distribution uniformity and adjustability to alter coverage seasonally, as well as the FLEX series including the block 'B' series, which, with their unique full or adjustable arc option and efficient Performance Series Nozzles, are suitable for every location on the golf course. Also at the show will be the P220G, 590G with Precision Rotating Nozzle, T5 and T7 sprinklers.

Robert Jackson, who heads up the Reesink Hydro-Scapes division, comments: "This extensive, effective, and efficient selection of products gives visitors plenty of options for best managing water as a resource. Toro products are known for their ease of use, precision, and reliability and when you couple that with the dedicated support from Reesink, it's a powerful combination for customers."

Rounding off what is on display will be two of the best-selling and most popular water aerators for creating the cleanest, healthiest water quality and preventative evaporation management, for your lakes, ponds, and reservoirs from Otterbine. The Fractional series makes its much-anticipated return complete with an Ottebrine accredited control panel.

Visitors to BTME can see all this as well as meet with Reesink representatives to discuss their course and club's irrigation and water management requirements on stand 622.
