

Top quality topdressing tops the bill for GKB at BTME 2025

If finding top quality topdressing solutions is the question, visitors to BTME are guaranteed to find the answer on stand 644 as GKB Machines return to Harrogate. Before attendees have even stepped foot inside the exhibition halls, they'll be able to see the mounted GKB SP100 parked outside of the Hall 6 entrance, with details of trailed and material-handling options all available by speaking with the GKB technical team.

With four different hopper capacities and trailed and mounted models, there's a GKB Sandspreader to suit all surfaces.

Delivering the ultimate versatility for broadcast topdressing, it is the fast and effective way to incorporate sand into greens,

fairways and surrounding areas to assist in the breakdown of thatch, increase infiltration and create conditions for vigorous grass growth.

The GKB SP100 is the smallest unit in the range, offering a 1.0m³ hopper capacity and up to 10m spreading width making it ideal for tasks around the golf course. Moving up through the range are hopper capacities of 2.3m³, 3.0m³ and 4.0m³ – the larger SP400 models providing unrivalled productivity therefore making them a popular choice for the contractor market.

In addition to the SP range, GKB also offer three SPM models, combining all of the characteristics and qualities of the robust and reliable Sandspreader with the addition of a material handler – ideal for topping up bunkers.

If time is tight and conducting sand integration with other operations is what's needed, then GKB have you covered here too with the renowned GKB Sandfiller! The Sandfiller is proof positive that multi-tasking doesn't have to result in a compromise in quality, tackling the issues of organic matter, compaction, drainage and sward density in a single pass.

The Sandfiller utilises the principles of GKB's much-praised Combinator, with carbide blades effectively slitting the surface, removing vegetation and creating channels to be easily refilled with dried sand, or a combination of sand and seed, creating a clean, play-ready finish.

Visitors will be able to see solutions from across GKB's portfolio for natural turf in action on stand 644's high-impact video wall, so be sure to stop by this January, grab some GKB giveaways and find out more.
