

Two new INFINICUT® mowers set to take centre stage at BTME 2025

Twelve months on from the launch of the INFINICUT® 22" FL golf cutting unit at BTME 2024, the company is set to return to Harrogate in January 2025 with two new patent-pending additions to the range. The new design of the INFINICUT® 22" FX and 26" FX features a brand-new cutting system and attachment/removal method offering unparalleled accuracy of cut and ease of maintenance. More details can be found by visiting stand 614.

The INFINICUT® stand is always awash with solutions designed to meet the exacting requirements for modern golf course maintenance, and BTME 2025 is shaping up to be no different. In the year since its launch, the 22" FL golf cutting unit has proven itself to be the most balanced mower for achieving low heights of cut with greenkeepers around the world. The two new models promise to build on this success, combining the very best in cut quality with technological advancements which not only benefit plant health, but optimise the operator experience.

Appreciating that every golf course is different and that course managers don't necessarily follow the same maintenance doctrine, all INFINICUT® models offer the ability to quickly and easily alter a range of mower parameters via the InfiniApp™. Settings can also be stored for retrieval and/or simultaneously sent wirelessly to multiple machines in a fleet, reducing time and all-but eliminating differentiation between mowers.

One InfiniApp™ feature that has proven extremely popular with operators is 'tilt and turn'. At the end of line turn, a sensor automatically detects that the mower is lifted and slows the unit down to a prechosen percentage of walk speed. Each individual operator can choose a slow-down rate that they are comfortable with and, when dropped back to the mow position, the regular mowing speed is engaged.

Further convenience is delivered thanks to the dedicated INFINICUT® trailer, offering the swift and safe transportation of 22" and 26" units between greens.

The technical team will be on hand across the three days to discuss the full INFINICUT® pedestrian range, together with the TMSystem™ collection of maintenance cassettes which transform the INFINICUT® or mainstream models of multi-gang mower into units for complete turf refinement.
