

Redexim stand promises to be a showcase of aeration solutions at BTME 2024

While some maintenance practices come and go, aeration remains essential to retaining course condition and playability - arguably more critical than ever following a year of record rainfall across many parts of the UK! With that in mind, aeration solutions are set to take centre stage for Redexim at BTME 2024 – with stand 532 featuring the iconic Verti-Drain® alongside a vast selection of other equipment from the Redexim fine turf portfolio.

The flagship high-speed Redexim Verti-Drain 2519, with its 1.9m working width and ability to accept a wide range of tine options promises to be a stand highlight, delivering unrivalled versatility - powerful enough for year-round operations on the fairways, and precise enough for work on greens and tees.

Also on show will be the Redexim Carrier equipped with Verti-Drain 1513, set up to show impressive capability for hollow coring. With a working depth of up to 6" (150mm), this combination is ideal for sensitive or soft areas, offering a fast, efficient and reliable solution for soil exchange programmes or maximum compaction relief with minimal ground pressure.

Besides effective aeration solutions, visitors can also expect to find the highly versatile, and highly popular, 6m wide Top-Brush. A true multi-tasker, the Top-Brush 6000 features three rotating brush rollers which lift and agitate the sward, removing moisture, debris and lateral growth and standing the plant up for improved air flow and a cleaner cut.

Redexim will also be launching a new cost-effective tool designed to tackle multiple maintenance tasks around the golf course, introduced to address the economic pressures currently facing facilities and maintenance budgets. While details ahead of the show are being kept closely under wraps, stand 532 will be the place to find this alongside the latest developments and promotions across the Redexim seeder range.
