

Vanmac stand 526 promises to be a 'one-stop shop' for effective maintenance solutions at BTME 2024

Whether mowing, cut and collect or scarification are on the agenda, then a conversation with Vanmac at BTME 2024 is a must – with a range of solutions from leading brands including Progressive and Trilo on display on stand 526. A particular highlight promises to be the Progressive TDR-X which leads the way for cut quality, finish and contour-following ability.

The **Progressive TDR-X** roller finishing mower features three independently floating decks which deliver outstanding cut quality over large areas, closely following undulations to leave a superior finish without risk of scalping. A combined cutting width of 3.2m and an easily adjustable HOC from 10mm to 85mm makes the **TDR-X** a versatile and highly productive choice on all types of fine turf and sports turf surface. Renowned for outstanding build quality, the **TDR-X** also features Progressive's unique Pro Lift-N-Turn technology, allowing the decks to be temporarily lifted for the avoidance of pathways and obstacles without disengaging the PTO.

Also on show from the Progressive range will be the **Pro-Flex 120**. With five floating rotary decks delivering outstanding uniformity of cut, including on uneven ground, the **Pro-Flex 120** has become the go-to for courses looking for a highly productive solution to contour and rough mowing.

Besides the Progressive range, and showcasing multi-functional machinery at its very best, will be the **Trilo M3**. Part of the multi-purpose collection, the **M3** with a range of interchangeable shafts is the perfect partner for a number of operations around the golf course – including leaf collection, scarification or cut and collect. Equipped with a flail rotor, the **M3** offers a cutting width of 1.5m and convenient collection of clippings in the large 3m³ hopper for quick and simple disposal.

For more information on any of the equipment mentioned, or other brands available from Vanmac including Brouwer Kesmac and Ecoclipper, be sure to speak to the Vanmac team at BTME 2024 who will be on hand and ready to answer your technical questions.
