

Teeing up sustainability: Germinal's climate smart golf solutions

As a greenkeeper, every decision you make directly impacts both the playability of your course and its environmental footprint. We are here to support you with solutions that align with your sustainability goals.

Germinal is proud to introduce our A Range, designed to elevate golf course performance. In addition, our two new wildflower ranges bring an opportunity to increase biodiversity and enhance the natural beauty of your course.

A Range: Modern bents for golf

With a renewed focus on performance and sustainability, the [A Range](#) redefines what greenkeepers can expect from their seed choices. Featuring varieties like 007 DSB and Tour Pro (GDE), these modern bentgrasses deliver exceptional playing conditions while requiring less intensive management.

Why choose A Range bents?

- Superior disease resistance
- Lower nitrogen and water requirements
- Persistence under close mowing
- Ability to outcompete *Poa annua*

Complementing these are Germinal Horizon-bred varieties AberMajesty, AberRegal, and AberRoyal, selected for their combination of outstanding performance and disease resistance.

Boost biodiversity with our brand-new wildflower range

Introducing [Urban Meadow](#) and [True Meadow](#) – two expertly formulated wildflower ranges designed to transform your golf course into a haven for pollinators.

With options for 100% UK native species and vibrant non-native mixtures, these blends support sustainability goals, adding ecological value and natural beauty to your course.

Slow-release fertilisers for long-term impact

Efficient fertilisation is a cornerstone of sustainable turf management.

That's why the A Range includes the [GSR Tri-Phase](#), an organic-based slow-release fertiliser designed to:

- Deliver essential nutrients steadily over five months.
- Support healthy, resilient turf growth.
- Reduce nutrient leaching, protecting nearby waterways.

With GSR Tri-Phase, you can achieve lush, resilient turf while maintaining your commitment to environmental stewardship.

Create the change with Germinal

Transform your golf course into a sustainable, high-performing space that inspires golfers and promotes ecological balance.
