

## Launching New Product – The Herbst GP28 Screener

Herbst Machinery Ltd manufacture Screening & Crushing equipment for the construction, demolition, recycling and groundworks industries. The company has recently added a range of new screeners to their portfolio of products. These machines are playing a pivotal role for use in turf management, screening the likes of topsoil and sand etc.

Due to the company's continued innovation Herbst will be launching the **GP28 Screener** @ BTME 2025

This is a Single Deck Vibrating Screener for processing a wide variety of materials on site. The screening plant is different from anything else they produce, as it is mounted onto a car trailer chassis. This allows it to be towed behind any 4x4 Vehicle or Jeep with towing capacity up to 3,500Kg; Getting it to site becomes very simple and setup is very quick also.

Ideally the machine will be loaded with small excavator, skid steer machine or small telehandler with appropriate bucket size. The screen mesh size can be easily changed so that the desired product is produced for the customer, whether this be Aggregate, Topsoil, Topdressing Material or Sand

With its' compact design and impressive performance, the GP28 is a very versatile machine. The small efficient powerpack, results in low running costs and is easily accessed for service & maintenance.

The new product compliments the complete range of machines offered by Herbst Machinery Ltd, with something to suit every variety of applications – big or small.
