Release: Immediate

VENTRAC – MORE THAN A MOWER

Colchester, Essex (12 September 2024) Price Turfcare, the UK and Ireland distributor of the Ventrac multi-implement, all-terrain compact tractor, returns to BTME with the Ventrac 4520 compact tractor unit and a selection of attachments.

Since its launch in 2017, this combination of highly manoeuvrable compact tractor and multiple attachments has quickly established a recognised place in UK turfcare industry. There are now 450 tractor units and in excess of 1,200 attachments being used across the UK turf sector.

With the capability to work on 30-degree slopes combined with incredibly low ground pressure and over 30 attachments, it's the most versatile equipment combination for the busy course manager. This is a machine that can mow in multiple formats, blow leaves, move snow, reinvigorate pathways, aerate, cut turf, dig trenches, grind stumps and prepare seedbeds ... everything a golf course of any size, can utilise all-year round.

Allan Patterson, the Director of Golf Courses and Estates at Trump Turnberry says, "Our Ventrac's have alleviated a lot of issues associated with working on steep banks. It can climb 30-degree slopes safely and with ease, cutting the number of hours the team previously spent strimming and frees them up for other tasks. I like the fact that it's a multi-tool, which means it can undertake several tasks and can be out on the courses or around the estate, virtually every day. It's an extremely versatile piece of equipment."

To understand why Allan and the rest of the industry have embraced the Ventrac product, come along and visit stand 122 in Hall 1.
